

"CAROL DAVILA" UNIVERSITY OF MEDICINE AND PHARMACY BUCHAREST

DISCIPLINE GRID

1. Programme:

1.1.	CAROL DAVILA UNIVERSITY OF MEDICINE AND PHARMACY BUCHAREST
1.2.	FACULTY OF DENTISTRY / 1st DEPARTMENT
1.3.	DIVISION: GENETICS
1.4.	STUDY DOMAIN: Health, sectoral regulated within European Union
1.5.	STUDY LEVEL: LICENCE
1.6.	STUDY PROGRAMME: DENTAL MEDICINE IN ENGLISH

2. Discipline:

2.1.	DISC	IPLI	NE NAME: (GENETICS	5			
2.2.	LOCA	ATIC	N: Buchares	st, 19-21, D	imitrie Gerota	Street, 1 st floor	•	
2.3.	Lectures tenure:							
	Emilia Severin – Professor							
2.4.	Practical classes tenure: Crenguța Albu – Assoc.Prof							
2.5. Study	year	II	2.6. Semester	IV	2.7. Evaluation	Exam	2.8. Type of discipline	CD/FD

3. Estimated total time (hours/semester)

No. hours/week	4	out of which	Lectures: 2	Laboratory session: 2
Total hours out of	56	out of which	Lectures: 28	Laboratory sessions: 28
learning schedule	30	out of which	Lectures. 20	Laboratory sessions. 20

Time distribution	hours
Textbook study, lecture support, bibliography and notes	28
Supplementary documentation activity in the library, on online platforms	7
Practical activity support material, homework, portfolio and essays	7
Tutorial activity	1
Examinations	1
Other activities	-
Total hours of individual study	44
Total hours per semester	100
Credits	4

4. Preconditions

4.1. curriculum	Knowledge aquired through the courses taken in the			
	year:			
	- Biochemistry			
	- Molecular Biology			
	- Embryology			
4.2. proficiencies	Knowledge of			
	optical microscope working techniques.			

5. Conditions

	-
5.1. for lecture	Auditorium with a minimum of 125 seats, equipped with specific technical amenities
activity	(computer/laptop, projector, whiteboard, PowerPoint or PDF course material, teaching aids, etc.). Students are expected to adhere to university education norms, including attendance, punctuality, and refraining from using mobile phones. Student tardiness during lectures and seminars/laboratory sessions is found to be disruptive to the educational process. Active and interactive learning is encouraged.
5.2. for laboratory activity	Laboratory equipped with a video projection system, whiteboard, microscopes, teaching materials, reagents, and instruments specific to genetic investigations. Active participation in practical classes. Requests for postponement (absence) from practical classes will only be accepted for valid reasons. Practical and applied learning.

6. Accumulated skills

6.1. Proficiencies	I. Knowledge (cognitive dimension)		
 Understanding and correct use of terminology, concepts, and fundamental p of human and medical genetics and genomics. Demonstrating analytical knowledge/interpretation capacity of genetic and concepts. Integrating this knowledge into modern precision medicine: pr personalized, preventive, and participatory. Specifically, Understanding the principles of chromosomal analysis methods and perform chromosomal test with the ability to interpret its results. Specifying the diagnosis and genetic counseling for chromosomal syndrom oro-dento-craniofacial involvement (Down, Turner, Klinefelter syndromes). Creating a family and maternal-fetal pedigree based on family and matern history, with the ability to interpret the mode of transmission of a pathologi. Understanding and applying the principles and indications of genetic consultations for prenatal diagnosis. 			
	 II. Abilities (functional dimension) Identification and utilization of optimal genetic tests based on the cause of the disease or anomaly under investigation. Laboratory work, both in teams and individually. Communication with the patient. Proper skills and attitudes in addressing medical and bioethical problem cases. Creativity and innovation in scientific research. 		
6.2. Transversal	III. Role skills		
skills	Autonomy / responsibility / social interaction		
(role, professional	 Identifying objectives to be achieved, available resources, completion conditions, work stages, work schedules, associated deadlines, and related risks. 		

and personal development)

- Familiarization with the roles and specific tasks within a teamwork context, as well as task delegation for subordinate levels.
- Recognizing roles and responsibilities within a multidisciplinary team and applying efficient communication and collaboration techniques within the team.
- Applying professional ethics principles and norms.

IV. Professional and personal development skills

Continuous personal and professional development:

- Awareness of the need for continuous training.
- Efficient use of informational sources and assisted professional communication and training resources (Internet portals, specialized software applications, databases, online courses, artificial intelligence, etc.) both in Romanian and in an international language of communication.

7. Objectives (based on the grid of acquired specific skills)

7.1. General **Objective** GO1.Acquisition by second-year students of fundamental knowledge in the field of structural, functional genetics, and genetic engineering with a major role in the current and prospective medical theory and practice. GO2. Integration of this knowledge into modern medicine: prospective, predictive, personalized, preventive, and participatory. 7.2. Specific SO1.. The objectives include the formation of a knowledge base that allows for **Objectives** understanding and addressing issues related to: Human heredity and normal/pathological variability, genetic disease diagnosis, genetic counseling, and genetic therapy. The genotype-phenotype relationship and the involvement of genetic factors in the occurrence of abnormalities and diseases with oro-dento-craniofacial localization. SO2. The development of skills and abilities necessary for applying genetic investigation concepts and methods (laboratory techniques: cytogenetic tests, pre- and postnatal genetic screening and diagnosis) in medical practice and providing genetic counseling/personalized care to patients with genetic conditions. SO3. Training in laboratory work, both as part of a team and individually.

8. Content

8.1. Lectures	No.	Teaching method	Obs.
	hrs/topic	Teaching method	Obs.
Course 1: Introduction to Human Genetics: Terminology,			
Concepts, and General Principles.			
1.1 The Content of Human Genetics: Genetics, the science			
of heredity and variability; Human genetics, a fundamental,			
clinical, and socio-medical discipline.			
1.2 Genetic and Biological Individuality	2		
1.3 Determinism of Human Traits			
1.4 The Genotype-Phenotype-Environment Relationship			
1.5 The Impact of Human/Medical Genetics on Daily Life			
1.6 The Molecular Basis of Human Heredity: Nucleic			
Acids and Genetic Information			
Course 2: The Structure and Functions of the DNA Molecule			
2.1 Discovery of the Molecular Structure of DNA			
2.2 Characterization of the DNA Molecule's Structure			
2.3 Alternative Structures of the DNA Molecule	2		
2.4 Characteristics of the Human DNA Molecule (Nuclear			
and Mitochondrial)			
2.5 Recombinant DNA Technology - Applications in			
Medicine			
Course 3: The Human Genome:			
3.1 Nuclear DNA and Mitochondrial DNA.			
3.2 Cellular RNAs: Structure, Types, Functions.			
3.3 DNA Organization in Eukaryotic Cells: Genetic	2	Interactive	
Apparatus, Nuclear Chromatin.		presentation of the	
3.4 Euchromatin and Heterochromatin.		material according	
Course 4: The MITOTIC Chromosome in Eukaryotes	2	to the curriculum,	
4.1 Chromosomal Analysis Techniques		using multimedia	
4.2 Synthetic Description of the Human Karyotype		tools, PowerPoint	
4.3 Heteromorphism of Human Chromosomes		presentations, and	
4.4 Indications for Chromosomal Analysis		educational videos.	
Course 5: Replication of Nuclear and Mitochondrial DNA.	2	cudcational videos.	
5.1 How is DNA Replicated? - Messelson & Stahl			
Experiment			
5.2 DNA Replication in vitro / in vivo			
5.3 Replication of Nuclear Chromosomes and the mt			
Chromosome			
5.4 Sex Chromosomes and Sex Determination			
Course 6: Human Chromosomes: Gonosomes			
6.1 Sexual Determinism and Sexual Differentiation			
6.2 Disorders of Sexual Development	2		
6.3 Conclusions: Chromosomal Abnormalities and Their			
Phenotypic Effects in Humans			
6.4 Genes - Structure, Analysis, and Gene Localization			
Course 7: The Gene - Classical vs. Modern Concepts			
7.1 The Chromosomal Theory of Inheritance			
7.2 Current Concepts of Gene Structure and Localization	2		
in Chromosomes			
7.3 Characteristics of Human Genes / Genes Involved in			
the Development of the Craniofacial Complex			
7.4 The Human Genome Project			
Course 8: Gene Interactions			
8.1 Allelic / Non-allelic Interactions	2		
8.2 Pleiotropy			I

8.3 Genetic Heterogeneity	
8.4 Phenocopy	
Course 9: Gene Expression (Gene Function)	2
9.1 Transcription	_
9.2 The Genetic Code	
9.3 Translation	
9.4 Regulation of Gene Expression	
Course 10: Reverse Transcription; Human Genetic Diseases	
and Defects	
10.1 Structure and Functions of the Viral Genome /	
Replicative Cycle	2
10.2 Chromosomal Disorders (Characteristics)	
10.3 Nuclear Monogenic Diseases (Mendelian Diseases)	
10.4 Exceptions to Mendelian Inheritance	
Course 11: Human Genetic Diseases and Defects	
11.1 Multifactorial Human Diseases	
11.2 Diseases Caused by Pathogenic Variants in Somatic	
Genes	2
11.3 Carcinogenesis, Malignant Phenotype, and Genetic	
Predisposition in Cancer, Hereditary Cancers	
11.4 Oncogenes vs. Proto-oncogenes, Tumor Growth	
Suppressor Genes, Stability Genes, MicroRNA Genes.	
Course 12: Human Genetic Variability	
12.1 Individual Variations	
12.2 Genetic Variation and DNA Profiling	
12.3 Sources of Genetic Variation: Mutation, Genetic	2
Recombination, and Migrations	
12.4 Phenotypic Effects of Benign / Pathogenic / Common	
/ Rare Gene Variants on Oral Health	
Course 13: Developmental Genetics and Human Congenital	
Abnormalities	
13.1Embryofetal Developmental Abnormalities:	2
Definition, Classification, Prevalence	
13.2 Causes of Congenital Abnormalities	
13.3 Morphogenesis Errors	
13.4 Teratogenesis	
Course 14: Ecogenetics/Pharmacogenetics/ Pharmacogenomics	
14.1 A Brief Chronology of Pharmacogenetics	_
14.2 Possible Effects of a Medication / Pharmacogenetic	2
"Accidents"	
14.3 Pharmacogenetic / Pharmacogenomic Testing	
14.4 FINAL CONCLUSIONS OF THE GENETICS COURSE	

8.2 Laboratory Sessions	No. hrs/topic	Teaching method	Obs.
Human Cytogenetics Practical Work (P.W.) 1 - Human Chromosomes and Normal Karyotype	2	Structured by the type of laboratory activity:	
Human Cytogenetics P.W.2 - Cell Cycle, Meiotic Chromosomes, and Meiosis in Humans	2	Active- participatory methods,	
Human Cytogenetics P.W.3 - Chromosomal Aberrations: Types, Mechanisms, Examples.	2	heuristic conversation, using	
Human Cytogenetics	2	multimedia	

P.W.4 - Chromosomal Pathology with Craniofacial		tools within the
Involvement		student group.
Human Cytogenetics P.W.5 - Sex Chromosomes and Sexual Chromatin	2	Observation, practical
Human Monogenic Heredity P.W.6 - Mendelian Laws of Inheritance – Practical Applications	2	demonstration, applied exercises,
Human Monogenic Heredity P.W.7 - Models of Monogenic Trait Transmission / Pedigree Method (Composition and Interpretation), Family Studies	2	experiments, case studies applied in groups or individually.
Human Monogenic Heredity P.W.8 - Simple Human Traits I (Blood Group Genetics, Hemoglobin)	2	 Preparation of reports/projects. Practical applications
Human Heredity P.W.9 - Simple Human Traits I (Taste Sensitivity, PTC, Salivary Secretor Status)	2	based on theoretical concepts and principles
Human Polygenic Heredity P.W.10 - Quantitative Human Traits (Cephalometrics in Dental Medicine – Constitutional Types in Genetic Pathology)	2	(biological samples, genetic investigation
Human Polygenic Heredity P.W.11 - Quantitative Human Traits (Identity and Individuality, Dermatoglyphics in Medical Genetics)	2	techniques, presentations of analysis reports, and
Integration of Genetic Knowledge into Medical Practice P.W.12 - Genetic Consultation and Genetic Counseling / Prenatal Screening and Diagnosis	2	interpretation of results with students).
Human Population Evolution P.W.13 - Human Population Genetics – Hardy-Weinberg Law (Applications and Problems)	2	PowerPoint presentations, educational
P.W.14 - Final Conclusions – Consultations - Make-up Sessions	2	videos.

8.3. Bibliography for lectures and laboratory/practical sessions

REQUIRED READING FOR STUDENTS:

- 1. Taught Course 2023, Severin Emilia
- 2. The PowerPoint presentations discussed during the practical sessions. 2023, Severin E, Albu C
- 3. Strachan T, Lucassen A (2023) Genetics and Genomics in Medicine (2nd Edition), CRC Press Taylor&Francis Group, Boca Raton London New York.
- 4. Thompson & Thompson Genetics and Genomics in Medicine (2023), Elsevier eBook on VitalSource, 9th Edition.
- 5. Gil de Bona A, Karaaslan H (2022) Human Tooth and Developmental Dental Defects, IntechOpen.

RECOMMENDED BIBLIOGRAPHY

- 6. Cummings MR (2019) Human Heredity: Principles and Issues, 12th Edition, Thomson Brooks Cole Publishing
- 7. Gorlin RJ, Cohen MM, HenneKam RCM (2010) Syndromes of the Head and Neck, 5th Ed., Oxford Univ Press
- 8. Dracopoli N.C et al. (2004) Short Protocols in HUMAN GENETICS, Wiley
- 9. Jones KL (2021) SMITH'S Recognizable Patterns of Human Malformation, 8th Ed., Elsevier Saunders
- 10. Lewis Ricki (2017) Human Genetics, 12th Edition, McGraw Hill Higher Education

9. Corroborating the contents of the discipline with the expectations of epistemic community representatives, professional associations and employers in the fields representative for the program

- The study program covers essential aspects of genetics, acquainting students with terminology, concepts, principles, and specific research methods in genetics, preparing them both theoretically and practically for their future medical careers.
- The curriculum promotes the development of professional and transversal competencies required in medical practice, both in Romania and the EU. Additionally, the selected topics are relevant to the needs and requirements of the epistemic community.
- The thematic content of the practical work and the course is approached multidisciplinary, stimulating independent and creative thinking, critical analysis, and is the result of collaboration with faculty members from other universities, both national and international.

10. Evaluation

10.1 Evalua				
Activity	Evaluation Criteria	Methods of evaluation	% out of	
type			final grade	
	A. Knowledge for mark 5: A low level of competence characterized by modest knowledge of the subject matter and an inadequate use of specific terminology; fundamental concepts are understood to a very limited extent and are expressed with difficulty; the provided answers lack clear syntheses or an appropriate approach to the topics. This performance corresponds to obtaining 22 correct answers out of the 45 questions on the grid.	Continuous Assessment - Control Papers (Multiple Choice Test) 2 written tests in the form of multiple-choice tests covering the course material and practical work completed in the first and second halves of the semester.	20%	
Lecture	B. Additional knowledge for mark 10 A high level of competence characterized by deep and extensive knowledge of the subject matter, along with impeccable use of specific terminology; the student demonstrates a detailed and rigorous understanding of fundamental concepts and can express them with clarity and precision; the provided answers are accompanied by clear and appropriate syntheses, highlighting a complex and comprehensive approach to the topics. This performance corresponds to obtaining nearly a perfect number of correct answers out of the 45 questions on the grid.	Summative Assessment - Written Theoretical Exam (multiple-choice or essay-type)	50%	
Laboratory Sessions	A. Knowledge for mark 5: A low level of performance characterized by evident confusion regarding fundamental concepts and specific terminology; modest abilities and skills in using laboratory techniques; errors in solving practical applications. B. Additional knowledge for mark 10:	Practical assessment: ongoing oral assessment formative assessment through surveys teacher- student dialogue, structured questionnaire with a set of questions. The student's attitude in the laboratory is evaluated (attendance, punctuality, attire, theoretical	10%	

A high level of performance characterized by excellence in knowledge and the application of working methods; the ability to choose and justify complex methods based on suspected pathology; efficient teamwork and taking on leadership roles; excellence in handling equipment and	preparation in line with the work phase, work skills, creativity).	
conducting experiments; the ability to solve complex problems and interpret data in-depth; an understanding of professional ethics.	Final Practical Assessment - Oral Exam evaluation of the student's ability to apply certain knowledge in practice as well as the level of mastery of skills acquired.	20%

Minimum performance standards

- at least 50% on each assessment component.
- Students will describe the processes of mitosis and meiosis (define haploidy, diploidy, and polyploidy; compare the number and type of chromosomes in haploid and diploid cells; interpret human karyotypes in terms of the chromosomes abnormalities).
- Students will explain classical genetics at the molecular level (describe the molecular structure of DNA, including the complementary nature of the coding and non-coding strands; explain how DNA molecules and chromosomes replicate themselves).
- Students will explain the basic rules and processes associated with the transmission of genetic characteristics (distinguish among chromosomes, genes, and alleles).
- Students will understand and evaluate the significance of genetic information in tooth development.
- apply a range of skills and laboratory genetic techniques to addressing specific problems in the field of Genetics in Dentistry.

Date: September 4, 2023 Chair of Genetics Division,

Prof.dr. Emilia Severin

Date of the approval in Department Board:

Department director, Prof.dr. Marina Imre
