Obiectivul principal al acestui studiu este de a optimiza tratamentul actual al schizofreniei, având ca scop identificarea celor mai bune opțiuni de tratament pentru abordarea primului episod psihotic.

### **Grant național - membru în echipa de cercetare a proiectului TELEDIM.**

[ 2012 ]

Cercetare pentru dezvoltarea unui sistem expert de telemedicină pentru furnizarea de răspuns medical optim în situații de dezastre și managementul situațiilor de urgență (utilizând cele mai recente tehnologii în biosenzori, comunicații prin satelit, navigație prin satelit, IT etc.), câștigată prin competiție în cadrul Programului STAR pentru cercetare, dezvoltare și inovație - Tehnologie spațială și cercetare avansată.

### **Investigator principal**

[ 2023 – În curs ]

Un studiu de fază 2B, randomizat, dublu-orb, controlat cu placebo și cu substanță activă, privind eficacitatea și siguranța MK-8189 la participanții cu diagnosticul de schizofrenie, aflați în episod psihotic acut. Scopul este de a compara eficacitatea MK-8189 la doze de 16 și 24 mg cu placebo în reducerea scorului total PANSS la Săptămâna 6. De asemenea, se urmărește evaluarea siguranței și tolerabilității MK-8189.

[ 2022 – În curs ]

Un studiu de fază II/III, prospectiv, multicentric, randomizat, de 4 săptămâni, dublu-orb, controlat cu placebo, conceput pentru a determina siguranța, tolerabilitatea, efectele EEG și eficacitatea dozelor orale de 30 mg BID de evenamidă (NW-3509) la pacienții cu schizofrenie cronică care prezintă simptome sub tratamentul lor actual cu antipsihotice de generația a doua (aripirazol, clozapină, quetiapină, olanzapină, paliperidonă sau risperidonă).

## **Investigator principal**

[ 2019 ]

Un studiu multicentric, randomizat, dublu-orb, cu grupuri paralele, controlat cu placebo, cu durată de 12 săptămâni, ce a evaluat eficacitatea și siguranța a 2 doze fixe de MIN-101, în monoterapie, la pacienții adulți cu simptome negative de schizofrenie, urmat de o extensie în deschidere de 40 de săptămâni. Protocol MIN101C07, Faza III

## **Investigator principal**

[ 2014 ]

Studiu randomizat, dublu-orb, controlat cu placebo pentru a evalua eficacitatea și siguranța aspirinei, comparativ cu placebo ca adjuvant la antipsihotice în tratamentul pacienților cu schizofrenie sau tulburare schizoafectivă și niveluri ridicate de CRP. Protocolul nr. ASA-CRP-01, Sponsor Prof. Dr. Mark Weiser
